Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed.

ENVIRONMENTAL HAZARDS

This product is toxic to plants; drift and run-off may be hazardous to plants in water adjacent to treated areas. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate. See *Directions for Use* for additional precautions and requirements.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons directly. Only protected handlers may be in the area during application. Do not apply directly to water or inject into stems below the water level. Woody vegetation may be controlled by injection of EZ-Ject™ selective injection herbicide shells. This product controls woody brush, trees and vines on the following sites: forestry, roadsides, rights-of-way, industrial, residential, fencerows, railroads and standing water and wetlands. For trees and brush in standing water or wetlands this product may be injected only into stems above the water level.

This product moves throughout the tree, brush or vine from the point of injection to all roots and shoots. Symptoms appear gradually (normally within 2 to 4 weeks) beginning with wilting, yellowing and browning of the foliage. This is followed by deterioration of all roots and shoots.

Inject the shells using only the EZ-Ject shell injection equipment. The shells must penetrate through the outer bark into living xylem/phloem tissue to provide effective results. For trees with less than 2.5 inches of trunk diameter measured at the base of the plant, inject one shell per stem below all major branches. For trees greater than 2.5 inches of trunk diameter, measured at the base of the plant, inject one shell every 2-4 inches of trunk circumference, evenly spaced around the trunk of the tree, below all major branches. Trees, brush and vines may be injected at any time of the year except when wood is frozen. For woody brush with a minimum of 3/4" diameter, inject one shell at the base of the plant.

Note: Injury may occur to non-target or woody plants if they extend from the same root system, or their root systems are grafted to those of the treated tree.

The species of woody brush, trees and vines controlled by this product include:
